**The Customizer and MailChimp addons have been deprecated and are no longer available for download.**

## Custom Outputs

You can customise the default output styles that are registered by Delightful Downloads using the `dedo_get_styles` filter. This will allow you to add or remove output styles that are used by the `[ddownload]` shortcode and will also affect which output styles are shown by the shortcode generator. In addition, any custom outputs can be selected as the default style in the *Settings* screen under the *Shortcodes* tab.

The screenshot displays the 'Insert Download' interface within a WordPress environment. The main area features a table of existing downloads, and the right sidebar provides details for a selected download and options for customizing its output style.

Title	Size	Downloads
Another Sample Download	36.5 KB	2,353
Kindle File	320.0 Bytes	2,226
Sample Download	61.0 KB	2,386
Simple Document	5.9 KB	2,267

Downloads: 2,353  
36.5 KB

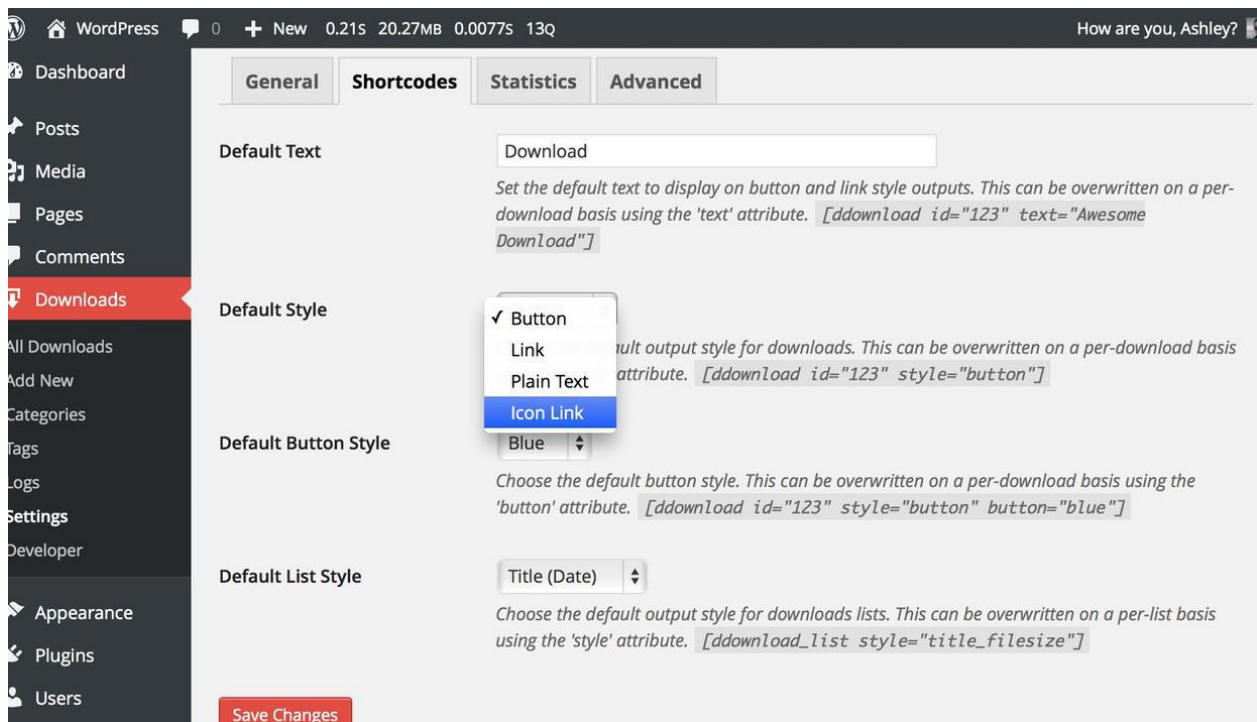

Text: Default

Style: 

- ✓ Default
- Button
- Link
- Plain Text
- Icon Link

Insert File Size

Insert Download Count

The following output styles are registered by default:

```
1 <?php
2
3 $styles = array(
4     'button' => array(
5         'name' => __( 'Button', 'delightful-downloads' ),
6         'format' => '<a href="%url%" title="%text%" rel="nofollow" class="%class%'
7     ),
8     'link' => array(
9         'name' => __( 'Link', 'delightful-downloads' ),
10        'format' => '<a href="%url%" title="%text%" rel="nofollow" class="%class%'
11    ),
12    'plain_text' => array(
13        'name' => __( 'Plain Text', 'delightful-downloads' ),
14        'format' => '%url%'
15    )
16 );
```

defaults.php hosted with ❤ by GitHub [view raw](#)

You will notice that various wildcards are used to enter dynamic content such as %url% and %text%. A full list of the available wildcards can be found [here](#).

## Add Outputs

To add a new output style to those already registered by Delightful Downloads simply add a new key to the \$styles array:

```

1  <?php
2
3  function dedo_custom_output( $styles ) {
4      $styles['icon_link'] = array(
5          'name' => __( 'Icon Link', 'delightful-downloads' ),
6          'format' => '<div class="download_container"><i class="fa fa-download"><
7      );
8
9      return $styles;
10 }
11 add_filter( 'dedo_get_styles', 'dedo_custom_output' );

```

add.php hosted with ❤ by GitHub

[view raw](#)

To completely replace the default output styles simply overwrite the `$styles` array:

```

1  <?php
2
3  function dedo_custom_output( $styles ) {
4      $new_styles['icon_link'] = array(
5          'name' => __( 'Icon Link', 'delightful-downloads' ),
6          'format' => '<div class="download_container"><i class="fa fa-download"><
7      );
8
9      return $new_styles;
10 }
11 add_filter( 'dedo_get_styles', 'dedo_custom_output' );

```

overwrite.php hosted with ❤ by GitHub

[view raw](#)

You use a custom output like so, `[download id="123" style="icon_link"]`.

## Remove Outputs

Existing outputs can be removed by simply unsetting them. The following snippet will remove the plain text output:

```

1  <?php
2
3  function dedo_custom_output( $styles ) {
4      unset( $styles['plain_text'] );
5
6      return $styles;
7  }
8  add_filter( 'dedo_get_styles', 'dedo_custom_output' );

```

All of the above code snippets should be added to your theme's `function.php` file.

## Custom Buttons

You can customize the default buttons that are registered by Delightful Downloads using the `dedo_get_buttons` filter. This will allow you to add or remove button styles that are used by the `[ddownload]` shortcode and will also affect which buttons are shown by the shortcode generator. In addition, any custom buttons can be selected as the default button style in the *Settings* screen under the *Shortcodes* tab.

The screenshot displays the 'Insert Download' interface within a WordPress admin area. The main panel features a table of existing downloads with columns for Title, Size, and Downloads. A search bar is located at the top right of the table. The sidebar on the right, titled 'DOWNLOAD DETAILS', allows for configuring a new download. It includes fields for Text, Style, and Color. The 'Style' dropdown is currently set to 'Button', and the 'Color' dropdown is open, showing a list of color options: Default (checked), Black, Blue, Grey, Green, Purple, Red, Yellow, and Hot Pink.

Title	Size	Downloads
Another Sample Download	36.5 KB	2,353
Kindle File	320.0 Bytes	2,226
Sample Download	61.0 KB	2,386
Simple Document	5.9 KB	2,267

Style:  
Button

Color:  
✓ Default  
Black  
Blue  
Grey  
Green  
Purple  
Red  
Yellow  
Hot Pink

The following buttons are registered by default:

```
1  <?php
2
3  $buttons = array(
4      'black' => array(
5          'name' => __( 'Black', 'delightful-downloads' ),
6          'class' => 'button-black'
7      ),
8      'blue' => array(
9          'name' => __( 'Blue', 'delightful-downloads' ),
10         'class' => 'button-blue'
11     ),
12     'grey' => array(
13         'name' => __( 'Grey', 'delightful-downloads' ),
14         'class' => 'button-grey'
15     ),
16     'green' => array(
17         'name' => __( 'Green', 'delightful-downloads' ),
18         'class' => 'button-green'
19     ),
20     'purple' => array(
21         'name' => __( 'Purple', 'delightful-downloads' ),
22         'class' => 'button-purple'
23     ),
24     'red' => array(
25         'name' => __( 'Red', 'delightful-downloads' ),
26         'class' => 'button-red'
```

```

    ),
    'yellow' => array(
        'name' => __( 'Yellow', 'delightful-downloads' ),
        'class' => 'button-yellow'
    )
);

```

defaults.php hosted with ❤ by GitHub

[view raw](#)

## Add Buttons

To add a new button to those already registered by Delightful Downloads simply add a new key to the `$buttons` array:

```

1  <?php
2
3  function dedo_custom_button( $buttons ) {
4      $buttons['custom'] = array(
5          'name' => __( 'Custom Button', 'delightful-downloads' ),
6          'class' => 'button-custom'
7      );
8
9      return $buttons;
10 }
11 add_filter( 'dedo_get_buttons', 'dedo_custom_button' );

```

add.php hosted with ❤ by GitHub

[view raw](#)

To completely replace the default buttons simply overwrite the `$buttons` array:

```

1  <?php
2
3  function dedo_custom_button( $buttons ) {
4      $custom_buttons['bright_pink'] = array(
5          'name' => __( 'Bright Pink', 'delightful-downloads' ),
6          'class' => 'button-bright-pink'
7      );
8
9      return $custom_buttons;
10 }
11 add_filter( 'dedo_get_buttons', 'dedo_custom_button' );

```

overwrite.php hosted with ❤ by GitHub

[view raw](#)

You use a custom button like so, `[download id="123" style="button" button="bright_pink"]`. Remember that you will need to style the button using CSS and the class name `button-bright-pink`.

# Remove Buttons

Existing buttons can be removed by simply unsetting them. The following snippet will remove the red and yellow buttons:

```
1 <?php
2
3 function dedo_custom_button( $buttons ) {
4     unset( $buttons['red'] );
5     unset( $buttons['yellow'] );
6
7     return $buttons;
8 }
9 add_filter( 'dedo_get_buttons', 'dedo_custom_button' );
```

remove.php hosted with ❤ by GitHub

[view raw](#)

All of the above code snippets should be added to your theme's `function.php` file.

## Custom Lists

You can customise the default list styles that are registered by Delightful Downloads using the `dedo_get_lists` filter. This will allow you to add or remove list styles that are used by the `[ddownload_list]` shortcode and will also affect which list styles can be selected as the default list style in the *Settings* screen under the *Shortcodes* tab.

The following list styles are registered by default:

```
1 <?php
2
3 $lists = array(
4     'title' => array(
```

```

5         'name' => __( 'Title', 'delightful-downloads' ),
6         'format' => '<a href="%url%" title="%title%" rel="nofollow">%title%</a>'
7     ),
8     'title_date' => array(
9         'name' => __( 'Title (Date)', 'delightful-downloads' ),
10        'format' => '<a href="%url%" title="%title% (%date%)" rel="nofollow">%ti
11    ),
12    'title_count' => array(
13        'name' => __( 'Title (Count)', 'delightful-downloads' ),
14        'format' => '<a href="%url%" title="%title% (Downloads: %count%)" rel="n
15    ),
16    'title_filesize' => array(
17        'name' => __( 'Title (Filesize)', 'delightful-downloads' ),
18        'format' => '<a href="%url%" title="%title% (%filesize%)" rel="nofollow"
19    )
20 );

```

defaults.php hosted with ❤ by GitHub [view raw](#)

You will notice that various wildcards are used to enter dynamic content such as %url%, %title% and %date%. A full list of the available wildcards can be found [here](#).

## Add Lists

To add a new list style to those already registered by Delightful Downloads simply add a new key to the \$lists array:

```

1  <?php
2
3  function custom_list( $lists ) {
4      $lists['icon_date'] = array(
5          'name' => 'Icon (Date)',
6          'format' => '<i class="fa fa-download"></i><a href="%url%" title="%title
7      );
8
9      return $lists;
10 }
11 add_filter( 'dedo_get_lists', 'custom_list' );

```

add.php hosted with ❤ by GitHub [view raw](#)

To completely replace the default output styles simply overwrite the \$lists array:

```

1  <?php
2

```

```

3  function custom_list( $lists ) {
4      $new_lists['icon_date'] = array(
5          'name' => 'Icon (Date)',
6          'format' => '<i class="fa fa-download"></i><a href="%url%" title="%title
7      );
8
9      return $new_lists;
10 }
    add_filter( 'dedo_get_lists', 'custom_list' );

```

overwrite.php hosted with ❤ by GitHub [view raw](#)

You use a custom list like so, [ddownload\_list style="icon\_date"].

## Remove Lists

Existing lists can be removed by simply unsetting them. The following snippet will remove the Title (File Size) list style:

```

1  <?php
2
3  function custom_list( $lists ) {
4      unset( $lists['title_filesize'] );
5
6      return $lists;
7  }
8  add_filter( 'dedo_get_lists', 'custom_list' );

```

remove.php hosted with ❤ by GitHub [view raw](#)

All of the above code snippets should be added to your theme's `function.php` file.
